**Introduction**

Stack owners are required to demonstrate their emission complies with the government’s regulatory limits during their permitting processes on routine and periodic basis.

After years of development and hardworking, ALS Hong Kong is proud to inform our clients that we are now accredited of the stack gas sampling for the analysis of Particulate Matter in according to:

**40 CFR Part 60 Appendix A-1, Test Method 5 (also known as US EPA Method 5).**

**Quality and Safety: First Priority!**

It is our commitment that ALS HK will provide the highest quality, most reliable and safe service to our clients. Our staff are well-trained and competent. Our equipment are calibrated and reliable. Our service is ready for your needs!

**Scope of Accreditation**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Method Reference (40 CFR Part 60)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selection of Sample and Velocity Traverse Points</td>
<td>Appendix A-1 Test Method 1, 1 July 2016</td>
</tr>
<tr>
<td>Determination of Stack Gas Velocity and Volumetric Flow Rate (By Type S Pitot Tube)</td>
<td>Appendix A-1 Test Method 2, 1 July 2016</td>
</tr>
<tr>
<td>Determination of Dry Molecular Weight of Stack Gas (By Orsat Analyzer)</td>
<td>Appendix A-2 Test Method 3, 1 July 2016</td>
</tr>
<tr>
<td>Determination of Moisture Content of Stack Gas</td>
<td>Appendix A-3 Test Method 4, 1 July 2016</td>
</tr>
<tr>
<td>Determination of Particulate Matter Emissions</td>
<td>Appendix A-3 Test Method 5, 1 July 2016</td>
</tr>
</tbody>
</table>

---

**Other Source Emission Tests**

The team is equipped for stack emission and testing for parameters including: Heavy Metals, Mercury, Hydrogen Halides & Halogens, Dioxins & Furans, PAHs, Ammonia, SO₂, NOₓ, PM₁₀, PM₂.₅, TOC according to the GB, US & European Standards.

CEM calibration works and QAL2 services are also available.
