

COVID-19 Surface Sampling & Detection

Solution to monitor the presence of COVID-19 Virus*

ALS provides routine analysis of critical environmental surfaces to determine the extent and persistence of COVID-19 virus. The results will help you monitor and strengthen the effectiveness of sanitation measures put in place.

Avoid work stoppage over COVID-19 virus fears—partner with ALS to identify COVID-19 viruses contaminated surfaces in your facility.

Where to swab

Help protect your employees by identifying which surfaces in your facility may play a role in the onward transmission of COVID-19 virus. Identify and list potential areas where employees, vendors or clients gather or touch as they pass through your place of business.

Common surfaces include ▼

- » Lift buttons
- » Handrails
- » Trolleys
- » Tables and chairs
- » Restrooms
- » Time clocks
- » Trays

Sample analysis

- » Molecular test for the qualitative detection of COVID-19 virus in swab samples of environmental surfaces by real-time PCR.
- » The nucleic acid is extracted, purified, and reverse transcribed into cDNA followed by nucleic acid amplification and detection.
- » A positive result indicates the presence of COVID-19 virus genetic material.

🕒 24-72 hour turnaround time

Sampling Kit

Each sampling kit contains all of the necessary items to take one environmental sample.

*Not suitable for human or animal testing.
